

Retail Sales Dashboard Analysis Report

Project Objective: To analyze retail sales transactions and build an interactive Excel dashboard that provides insights into revenue performance, product performance, store performance, regional contribution, category-wise sales, and sales trends over time.

Dataset Description

The dataset contains retail sales transaction records along with product, customer, and store information. The analysis was performed using Excel Pivot Tables, Pivot Charts, XLOOKUP functions, KPIs, and interactive dashboard components.

Column Description

Column Name	Description
Sales_ID	Unique sales transaction identifier
Order_Date	Date of transaction
Customer_ID	Unique customer identifier
Product_ID	Unique product identifier
Store_ID	Unique store identifier
Quantity	Quantity sold
Unit_Price	Price per unit
Discount	Discount applied
Payment_Type	Payment method used
Total_Amount	Final transaction value
Product_Name	Product description added using XLOOKUP
Category	Product category added using XLOOKUP
Region	Store region added using XLOOKUP

Data Cleaning & Transformation

- Validated data consistency across Product, Store, and Sales tables.
- Corrected Product ID mismatches.
- Used XLOOKUP to enrich Sales_Fact with Product_Name, Category, and Region.
- Verified lookup results and removed #N/A issues.
- Structured the dataset into an Excel table for Pivot analysis.

Visualization and Insights Arrived with Dashboard

Descriptive Analysis

- Total Revenue: 2,170,907
- Total Orders: 2,000

- Total Products: 100
- Total Stores: 20
- Sports and Electronics generated the highest revenue among categories.

Diagnostic Analysis

- Region-wise analysis identified North, South, East, and West contributions.
- Store-level analysis highlighted top-performing stores.
- Product-level analysis identified high-revenue products.

Predictive Analysis

- Historical sales trends indicate consistent demand across major categories.
- Revenue concentration in selected categories suggests future growth opportunities.
- High-performing regions can be targeted for expansion.

Prescriptive Analysis

- Increase inventory for top-performing products.
- Strengthen marketing campaigns in high-revenue regions.
- Improve promotions for low-performing categories.
- Monitor daily sales trends for better operational planning.

Dashboard Components Developed

1. Revenue by Product Chart
2. Store Revenue Comparison Chart
3. Region Revenue Contribution Pie Chart
4. Revenue by Category Chart
5. Daily Revenue Trend Chart
6. KPI Cards
7. Region Slicer
8. Category Slicer

Conclusion

The Retail Sales Dashboard successfully transformed raw transactional data into meaningful business insights. The dashboard provides a comprehensive view of revenue performance across products, stores, regions, and categories. Interactive filters and visualizations enable users to monitor performance, identify trends, and support data-driven decision making.
